

Our Values

Improving Energy Efficiency using highly efficient products and superior system controls

Maintaining Indoor Air Quality through intelligent software designed specifically for NZ

On-Demand Ventilation by monitoring air quality and ventilating as required

Why Ventilation

A healthy home requires good ventilation to maintain high Indoor Air Quality. Without ventilation, your home becomes a host for mould and mildew which thrive in humid conditions.

Plus long-term exposure to VOC's within your home can damage your health.

ENERGY EFFICIENCY

EVOAQ

Our System

Using the latest technology and most energy-efficient products, we have created the most intelligent ventilation system to give you constant ventilation, while having minimal effect on the thermal comfort and noise levels in your home.

Our systems are designed to meet international requirements of ASHRAE 62.2.

Positive Pressure Systems	AQ220	AQ300
House Size	Up to 220m ²	Up to 400m ²
Number of Rooms	1 - 6 Rooms	6 - 9 Rooms
Voltage (V/Hz)	230/50	230/50
Power (W)	3 - 73	3 - 165
Air Flow (m ³ /hr)	65 ~ 650	63 ~ 1228
Static Pressure (Pa)	457	580
Noise (dB)	31	38
Speed (RPM)	500 - 3000	500 - 3000
Weight (kg)	2.5	3.5
Specific Fan Power (SFP)	0.398 Watts per L/s	0.294 Watts per L/s

HIGH FLOW MIXED FLOW FAN
150MM

HIGH FLOW MIXED FLOW FAN
200MM

VENTILATION CONTROLLER
3-MODE ON-DEMAND ADJUSTMENT

HIGH VELOCITY CONE DIFFUSER
125MM / 150MM

PM2.5 FILTER
NEW REGULATIONS COMPLIANT

Demand Controlled Ventilation

Our systems use DCV - the ventilation rate is automatically adjusted according to user demand and the quality of incoming air, using our built-in intelligent controller which constantly senses air quality to regulate the level of ventilation.

Our specialised software determines the correct fan speed based on established standards, to achieve high indoor air quality as well as maximum thermal comfort.

Continuous Ventilation

By combining our DCV controls with highly energy-efficient EC fans, our systems can achieve high airflows when the outdoor air quality is good.

Most importantly, they can also achieve very low airflows when the outside air may affect the thermal comfort inside your house.

This is how our systems are able to ventilate continuously, where most other systems would turn off.
