

# Filter Replacement Instructions

*For filter replacement kit*  
**EVO-F7-FLT**

## **Kit Contents:**

- 1 x F7 Filter Media
- 1 x Filter Box Tape

*Please check that the kit contents are correct and in good condition upon receipt of the product.*

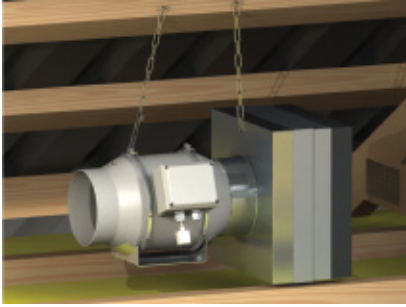

***Please read these instructions in full before commencing work.***

***Caution:*** Working in the ceiling space can be hazardous. Please take the appropriate safety precautions to ensure the safety of yourself and others.

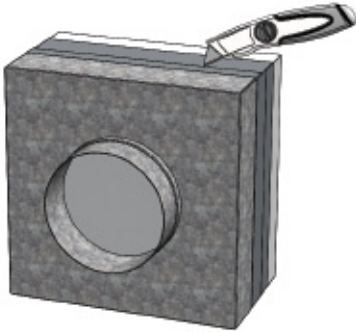

**Please dispose of the filter responsibly.** Our filters are bio-degradable and can be placed in general waste. Do not re-use or recycle the filter.

- 1 Locate your fan and filter inside the ceiling space.

*Be careful not to damage or remove the tape connecting the fan to the filter as this could cause the fan to bypass the filter and draw in air directly from the ceiling space.*

- 2 Using a knife, cut along the edges of the filter frame to cut the tape and loosen the filter media.

- 3 Remove the filter media from the frame.

- 4 Take the new filter media and place it inside the filter frame, noting the air flow direction.

- 5 Carefully tape the filter to the frame using the tape provided. Ensure the filter sits fully against the frame and the tape covers both the filter and the frame.
